

From “I like this look” to “this actually fits.”

A bathroom design assistant that combines AI taste-matching with deterministic space, budget and catalog rules.

*“I want a calm spa-like bathroom,
but I can’t go over ₹8 lakh.”*

The planner turns this into a solvable design brief.

The AI never gets to “hallucinate” a budget or footprint.

Araj Kapoor • MIT World Peace University

WHAT THE PRODUCT DOES

01

UNDERSTAND

Photo, dimensions, vibe, budget

02

CONSTRAIN

Space, price, catalog rules

03

DESIGN

Three viable directions

04

EXPLAIN

Why it works + impact

GENERATIVE AI PROPOSES

**DETERMINISTIC LOGIC
DECIDES**

A design brief becomes a working bathroom plan.

The interface keeps the human decisions on the left and the evidence behind the recommendation on the right.

WHY THIS WORKS

✓ Room fit

✓ Theme match

✓ Budget-safe

✓ 4 categories

₹7.6L

bundle total

water saved / year

modeled impact

KOHLER AI BATHROOM PLANNER • ARAJ KAPOOR

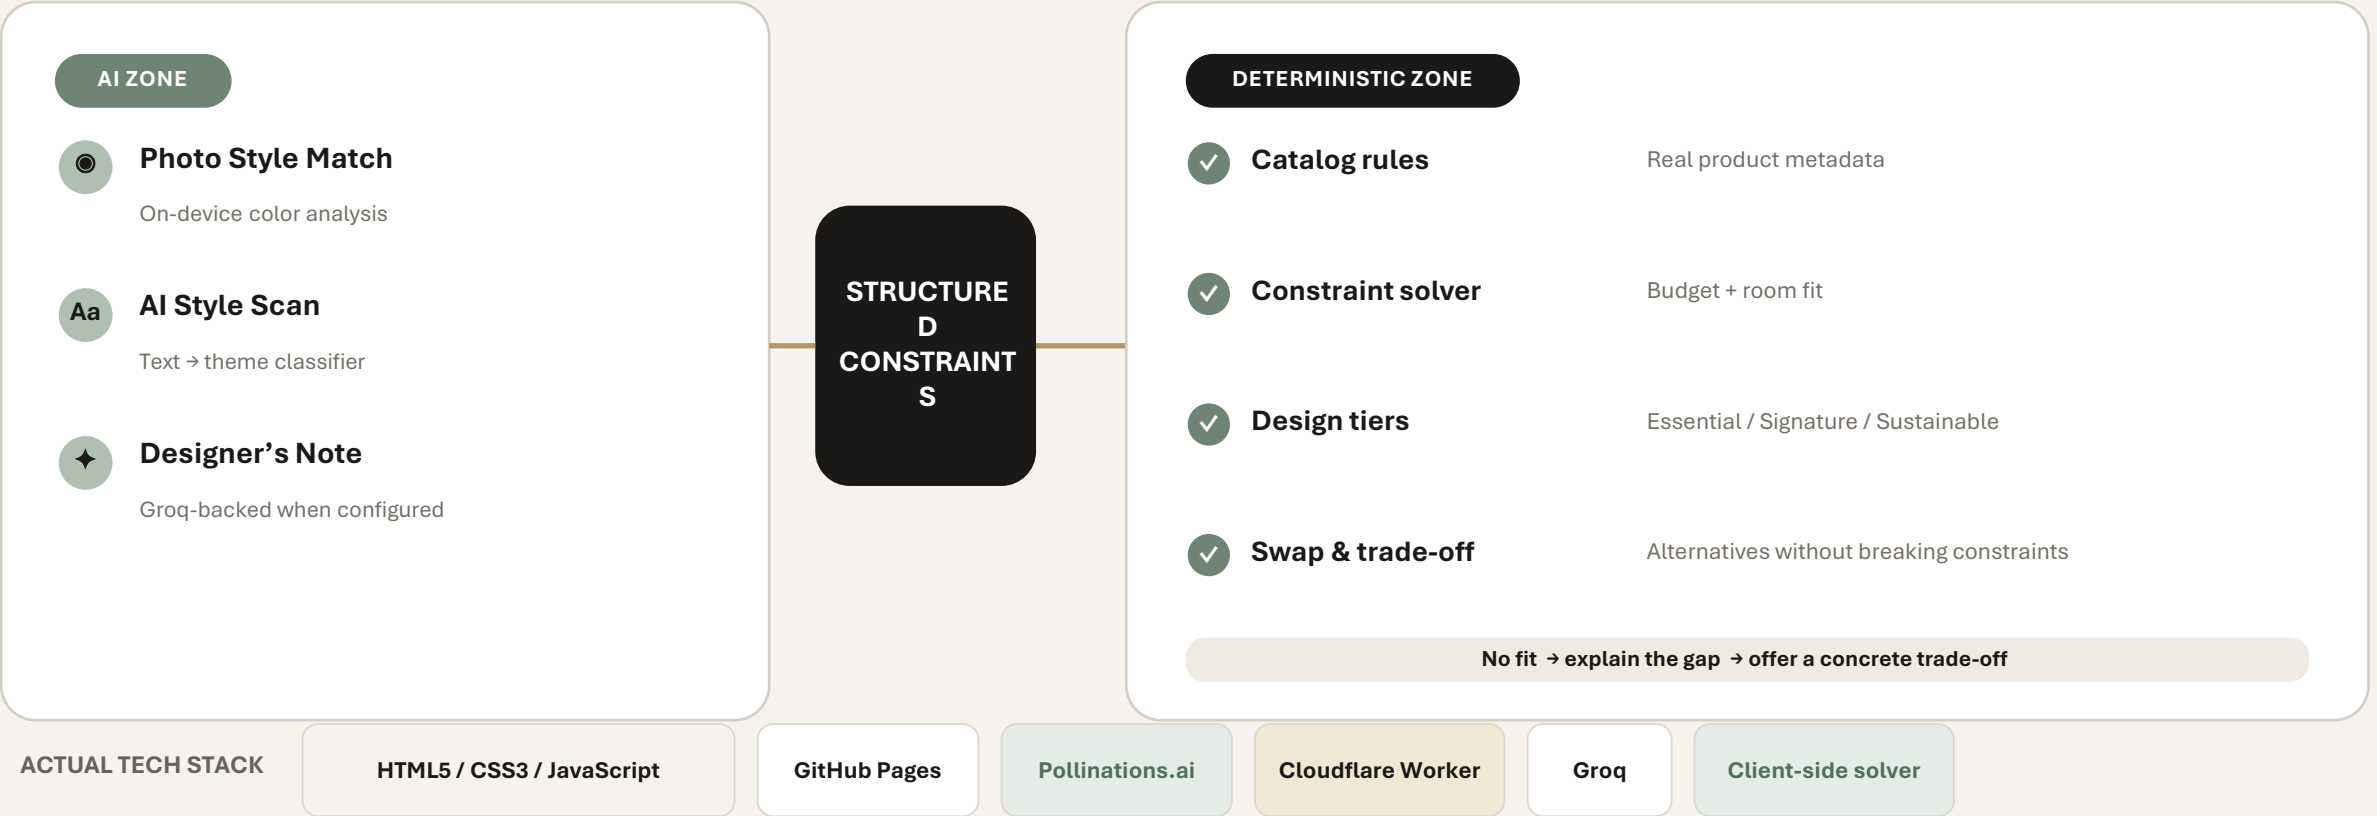

2 / 4

2⁰¹

AI interprets. Deterministic logic validates. The browser renders.

The architecture deliberately separates interpretation from decisions that must stay deterministic.

THE TRUST BOUNDARY

Static frontend • live moodboard generation • optional secure backend for the Designer's Note • local fallbacks preserve the core experience

It does not stop at “here’s a design.”

It helps the customer understand the choice, change it safely, and see the impact.
